AIMS AND SCOPE

The **Nurse Media Journal of Nursing (NMJN)** is an international nursing journal which publishes scientific works for nurses, academic people and practitioners. NMJN welcomes and invites original and relevant research articles in nursing as well as literature study and case report particularly in nursing.

This journal encompasses original research articles, review articles, and case studies, including:

- Adult nursing
- Emergency nursing
- Gerontological nursing
- Community nursing
- Mental health nursing
- Pediatric nursing
- Maternity nursing
- Nursing leadership and management
- Complementary and Alternative Medicine (CAM) in nursing
- Education in nursing

PUBLICATION INFORMATION

The **Nurse Media Journal of Nursing (NMJN)** is published twice a year every June and December.

For year 2017, 2 issues (Volume 7, Number 1 (June) and Number 2 (December) are scheduled for publication.

The NMJN is published by the Department of Nursing, Faculty of Medicine, Diponegoro University and available at <http://ejournal.undip.ac.id/index.php/medianers>. It has been indexed and abstracted in Google Scholar, Directory of Open Access Journal (DOAJ), Indonesian Publication Index (IPI) and Science and Technology Index (SINTA).

JOURNAL CITATION

Articles of the Nurse Media Journal of Nursing has so far been cited in:

Google Scholar h-index / i10-index	: 9 / 9
Total articles published in Google Scholar	: 42 (since 2012)
Total citations in Google Scholar	: 203 (since 2012)
Total articles indexed in IPI	: 99 (since 2014)
Total articles indexed in DOAJ	: 77 (since 2015)

INDEXING AND ABSTRACTING

The Nurse Media Journal of Nursing has been covered (indexed and abstracted) by the following indexing services:

- Google Scholar;
(<https://scholar.google.co.id/citations?user=G6nEgkAAAAJ&hl=en>)
- Portal Garuda/Indonesian Publication Index (IPI);

PREFACE

The Nurse Media Journal of Nursing (E-ISSN: 2406-8799, P-ISSN: 2087-7811) is an open access international journal which publishes the scientific works for nurse practitioners and researchers. The journal is published by the Department of Nursing, Faculty of Medicine, Diponegoro University and strives to provide the most current and best research in the field of nursing. The journal has been indexed in the Google Scholar, Portal Garuda/Indonesian Publication Index (IPI), Indonesian Scientific Journal Database (ISJD), Directory of Open Access Journal (DOAJ), and Science and Technology Index (Sinta). Currently, NMJN is also applying for indexing in the ASEAN Citation Index (ACI) and Scopus.

It is also with pleasure to inform you that the Nurse Media Journal of Nursing (NMJN), has received accreditation from the Directorate General of Research Strengthening and Development, the Indonesian Ministry of Research, Technology and Higher Education. This accreditation is based on the decree number 60/E/KPT/2016 dated on 13 November 2016 and will be valid until November 2021. Upon this achievement, the NMJN would like to thank all people (the NMJN editorial team, reviewers, authors) who have given their support and contribution in achieving this accreditation.

This issue (NMJN, Vol 7(2), 2017) has published five articles, consisting of two qualitative studies, one descriptive correlational study, one quasi-experimental study and one systematic review. This issue was authored and co-authored by the researchers and professionals from diverse countries, including Indonesia, Philippines, Oman, Kingdom of Saudi Arabia and Thailand. All papers have been double-blindly reviewed by the editors and reviewers of this journal.

The first article described a descriptive correlational study conducted by Lapeña, Tuppal, Loo, and Abe (2017). The study described aspects of a situation and explored relationships among leadership styles and job satisfaction. One hundred Filipino nurses (FNs) were recruited. The findings showed that FNs rated their level of satisfaction from high to a moderate extent along with professional autonomy, work environment, work assignment, and benefits. Participants agreed that their nurse managers utilized either transformational or transactional leadership styles. Findings indicated that both transformational and transactional leadership styles of nurse managers were correlated to nurses' job satisfaction.

The second article (Suparta, Waluyo and Kariasa, 2017) was a qualitative study exploring the lived experience of PLWHA and partner's responses toward the fulfillment of sexual needs. Using a phenomenological research design, fourteen PLWHA in Denpasar were interviewed through in-depth interviews. This study revealed five themes describing the sexual experiences of PLWHA, including: (1) the fulfillment of sexual need of PLWHA, (2) the roles of partner for PLWHA, (3) various perceived stimuli which could increase the sexual desire, (4) the perceived factors which could incapacitate the ability and quality of sexual desire, and (5) the efforts to increase sexual capability and quality.

The next article was a qualitative study describing the caring behaviors based on Islam for the patients in ICU from the perspective of nurses and patients' family (Ismail, Hattakit & Songwathana, 2017). Fourteen ICU nurses and 10 families were interviewed. The findings revealed that Islamic-based caring in ICU was connecting to God (*Allah*), being present with patients and family, and nurses were an instrument to assist the patients and

family to be faith in God. In addition, some barriers regarding Islamic based caring practice were presented, such as limited of knowledge and skill to provide Islamic based caring.

The next article was authored by Prabawati (2017). The study was a systematic review which described the process and other professional's involvement in IPE's nursing education, and described the implication after implementing IPE for nursing students and institution. Nineteen studies were used in this study. The result of the study showed that IPE programs utilized a variety of combinations of interactive learning methods, such as group problem solving, focus group interview, social networking (website), and simulated patient or simulated based training (SBT) which became the most common methods employed. IPE gave benefits for the students, such as improving communication skills, recognizing the role and responsibilities, understanding the value and ethics and also increasing teamwork and team-based care.

The last article was authored by Darmawan, Fatmasari & Pujiastuti (2017). This study was a quasi-experimental design which aimed to analyze negative air pressure differences on cupping in decreasing blood pressures in hypertensive patients. The samples were 36 hypertensive males who were randomly stratified into two groups with cupping pressures 400 mbar ($n=18$) as the control group; and 540 mbar ($n=18$) as the intervention group. The result of the study revealed that cupping pressure of 400 mbar decreased the mean of systolic blood pressure and diastolic blood pressures. However, there were no significant differences in systolic blood pressure and diastolic blood pressures between the intervention group and the control group.

Finally, the NJMN would like to thank the respectful authors, reviewers, and editors for their contribution and collaboration in publishing this current issue. Furthermore, the editors would like to appreciate and call for academic papers from the nurse-practitioners, academicians, professionals, graduates and undergraduate students, fellows, and associates pursuing research throughout the world to contribute to this international journal.

Semarang, December 2017

Sri Padma Sari
